for the automotive industry

Power Strip Assembly

Hundreds of Configurations Available to The Industry

475
MILLION
parts
delivered
in 2017

Royal Power Solutions offers robust project management programs to support our vast suite of plastic processed components. We are

currently working on the third generation Chevy Volt injection molded lead frame design. We were the only North American manufacturer who was able to assist Yazaki North America on engineering a successful first generation lead frame on the Chevy Volt.

Flexible substrates-hard to soft	Insulating covers	Tethered cap designs eliminate loss of cap within engine area	Conductive plastic options available
Starter terminals with a variety of colors available	Electro-magnetic shielding plastics	EMC shielding plastic fibers are webbed throughout the substrate to create a barrier or insulates the frequency	High temperature environmental plastics & rubber overmolding
