

Stamped Battery Terminals

for the automotive industry

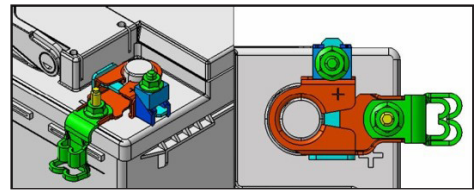

Top-down designs allow for the terminal to be tightened from the top with right or left hand side applications.

The Most Versatile, Best in Class Systems Produced Today

All of our stamped battery terminals are customizable and compatible to SAE and DIN battery configurations. Our tooling program is built with flexibility to adapt to the changing needs of our customers and routing requirements. We employ robust testing simulations to ensure our products are covered by the Royal Power Solution Lifetime Policy for Quality Standards.

M5 or M6 nut and bolt side tightening option	Positive or negative	Easy Lever Action eliminates need for tool on assembly line-promotes ease of maintenance/service	Center Drive Top Down eliminates right or left hand complexity
Angled Top Down feature available	Grip sizes ranging from 12 mm ² to 70mm ²	Additional routing configurations easily added to existing tooling with low or no tooling capital required in the quickest possible time	Optional insulation grip
M5 or M6 fastening hardware	Anti-rotational features available		Up to 3 auxiliary mounting studs available
